TITLE : POLARIZING PLATE HAVING ADHESIVE LAYER

ABSTRACT : PURPOSE: To obtain a polarizing plate having excellent resistance to heat and moisture by providing a pressure-sensitive adhesive layer consisting of a specific acrylic resin to a polarizing plate formed by coating a polarizable film with a cellulosic protective film.

CONSTITUTION: A pressure-sensitive adhesive agent layer consisting of an acrylic resin which has alkyl ester of acrylic acid (or methacrylic acid) as an essential copolymer component, contains 3-30wt% a polymerizable arom. monomer having benzene ring in a molecular as a copolymer component and may contain a polymerizable monomer having a carboxylic group in a molecular in an amt. of  $\leq 5\text{wt}\%$  is provided on at least one surface of a polarizing plate formed by coating a polymerizable film with a cellulosic protective film. A film formed by impregnating a polarizing element such as iodine, dichromatic dye or the like in a film made of a PVA resin and stretching the same to provide a polarizing property to the film is adequately used for the polarizable film to be used.
